HOUSING@21.EU is a pedagogic and research project financed by the European Union through the Erasmus Intensive Programme, which has been carried out in the period 2003-2006.

The goal of the project has been to study the emergence of new forms of housing in 21st century Europe. Transformations undergoing European societies, at the social, economic and technological levels, call for a revision of existing forms of housing. HOUSING@21.EU has provided a cross-disciplinary context where universities and industry, community representatives and policy makers in Europe have reflected on the nature of these transformations and their architectural and urban consequences.

Seminars and workshops, organized by the participating universities, have allowed professors to understand the problem of housing in today's Europe and give citizens access to it. A **web-based learning environment** has been implemented to facilitate the exchange among the partner institutions. This on-line platform has allowed students to do cases of study, propose themes of debate, and present design proposals.

2007-2009 Erasmus Virtual Campus

Description of the project outcomes and components.

OIKODOMOS is a pedagogic research project financed by the Lifelong Learning Programme. The goal of the project is to create a virtual campus to promote the study of dwelling at a European scale. The aim of OIKODOMOS, a Greek word for "to build, to construct a house", is to set an innovative learning structure in motion, incorporating on-line and on-site activities (blended learning). The first phase of the project was carried out from 2007 to 2009 within the subprogramme Erasmus Multilateral Projects-Virtual Campus. This phase of the project was executed by higher education institutions and research centers from Belgium, France, Slovakia, Spain, Switzerland and the United Kingdom. From 2010 to 2011, the activities of the project will continue under the support of the same European Agency, this time under the subprogramme Erasmus Accompanying Measures. In this second phase, the original consortium has been enhanced with a new partner from Turkey.

The main objectives for this second period are:

- To consolidate the virtual campus methodology and digital platform.
- To expand the application of the pedagogic methodology to other disciplines.
- To disseminate the results among the partner institutions.

OIKODOMOS Virtual Campus

OIKODOMOS Virtual Campus is a space of collaboration where schools and universities collaborate in the design and implementation of learning activities to study housing. The participation of professional organizations, local communities and other stakeholders is summarized as follows:

- It is a network of learners (teachers, students, adult learners) and activities, as opposed to an organization of schools with shared curriculum.
- It is interdisciplinary, since the learning activities conducted by the networks encompass architecture as well as urban planning.
- It goes beyond academia, since it seeks for the engagement of citizens and professionals in the field of housing studies.

OIKODOMOS DIGITAL PLATFORM

A digital platform has been specifically developed and implemented for the Oikodomos Virtual Campus to support a blended-learning pedagogic model. It consists of two environments: Workspaces and Case Repository.

OIKODOMOS WORKSPACES

This environment supports project-based learning activities, such as the development of a project, architectural and/or urban, in a collaborative

OIKONET

Since October 2013, OIKODOMOS activities within the OIKONET project are carried out under the Life Long Learning Programme. The new project which involves 34 institutions from Europe and around the world, is to interlink pedagogical activities, research on housing studies and community participation through a joint programme of activities including workshops, seminars and conferences. The OIKONET pedagogic activities are carried out with the OIKODOMOS Virtual Campus tools: Workspaces, Case Repository and Okopedia.

6 partners

2010-2011 Erasmus Accompanying Measures

7 partners + 5 associated partners

This environment supports project-based learning activities, such as the development of a project -architectural and/or urban- in a collaborative manner. It facilitates the collaboration among distant learners, carrying joint learning activities in different settings, physical and virtual: design studios, seminars and courses.

OIKODOMOS CASE REPOSITORY

This is a digital repository of housing case studies, which is constructed collaboratively by learners. Currently, it has over 330 documented cases, analyzed and commented by students and teachers from different institutions. It is used to support learning based on the analysis of precedents.

OKOPEDIA

A global multidisciplinary network on housing research and learning.

OIKONET is a network of 34 schools of architecture and planning, research groups, professional and community organizations, and local administrations from 25 countries in Europe and around the world. The goal of the network is to promote innovation in the study of dwelling at a global scale by interlinking three areas: pedagogy, research and community participation. The activities of this three year project (2013-16) are co-funded by the European Union through the EACEA. This website provides information about the project activities to partners and to other parties interested in the work of the network.

OIKONET Blogs

Barcelona International Conference

Bratislava International Conference

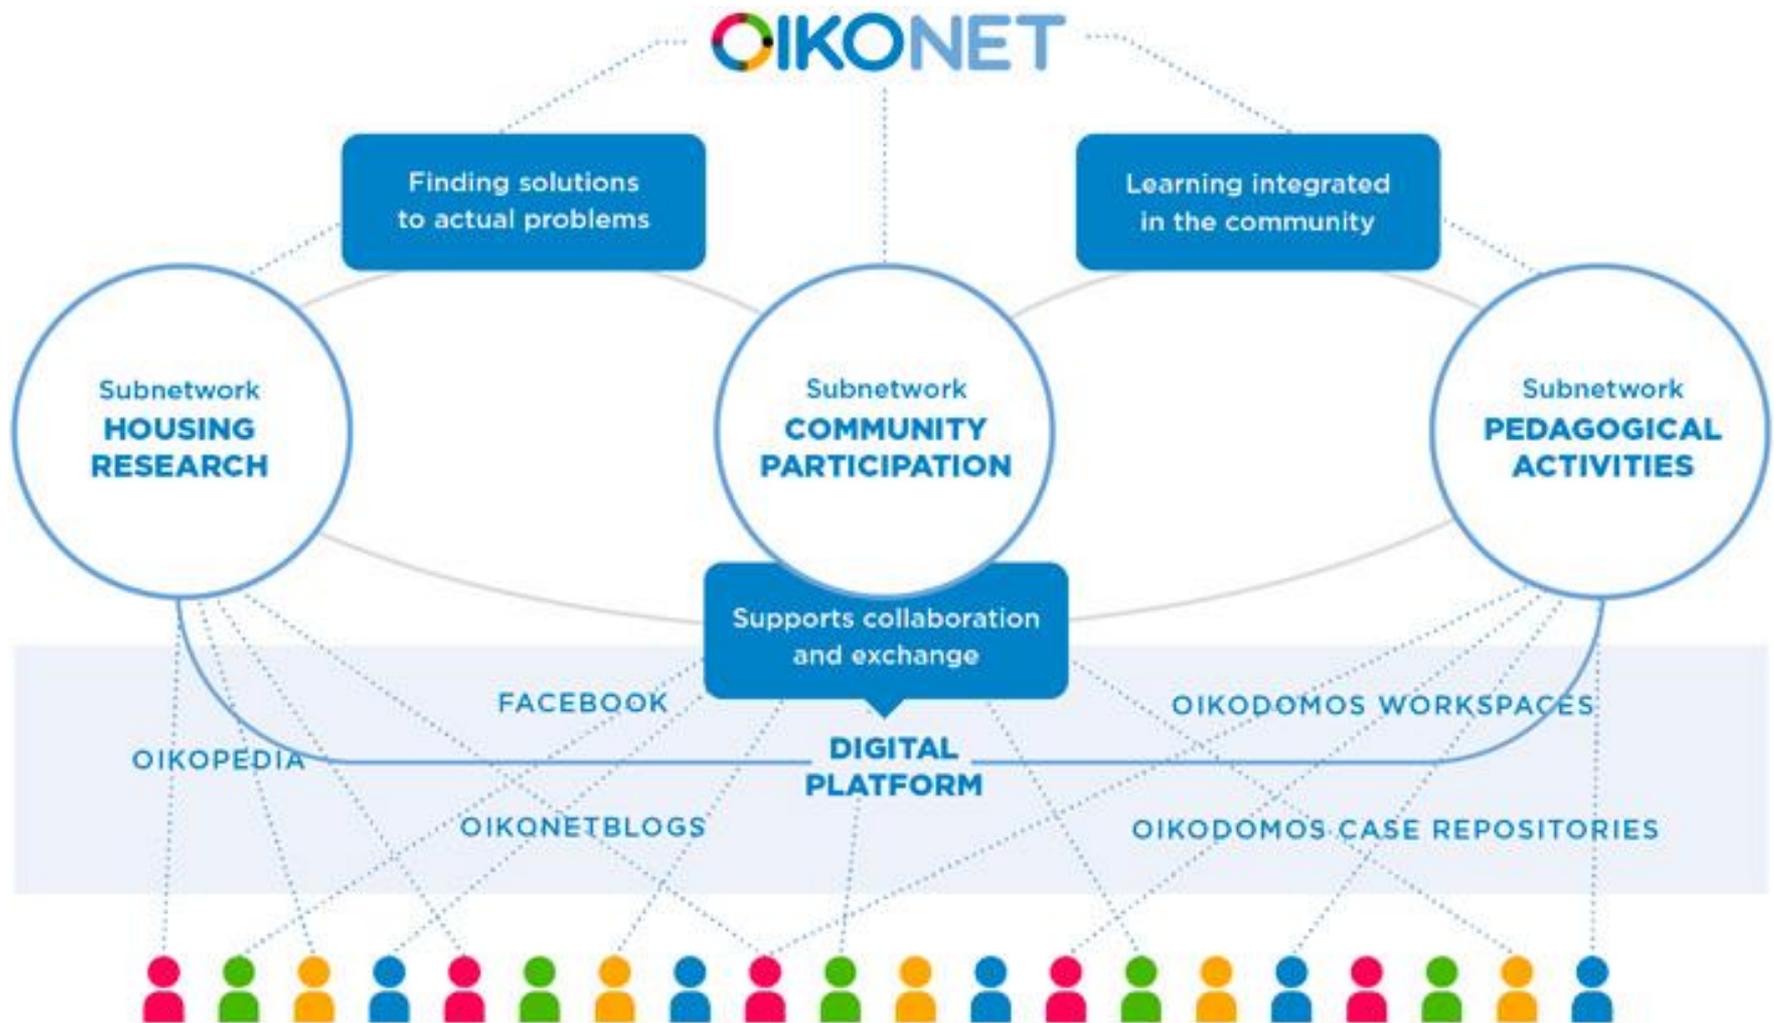

- OIKONET is an Erasmus Network Project, co-financed by the Life Long Learning Programme of the European Union (2013-16).
- The goal of Erasmus academic networks is to promote European cooperation and innovation within a given academic discipline, fostering innovation, exchange of methodologies and good practices.

-OIKONET consortium is made of 34 organizations from 29 countries (25 within Europe) :

- **19 Higher education institutions**
- **10 Research institutes**
- **2 Social organizations**
- **1 Professional organization**
- **1 Local administration**
- **1 International agency**

- a network of institutions, European and non-European, representing different disciplines concerned with housing studies.
- a network of themes of study about contemporary housing proposed and debated by the project partners.
- a network of learning activities, designed in collaboration and carried out following a blended learning approach.
- a network of learners, from different institutions, inside and outside academia, constructing knowledge in collaboration through participatory processes in the various learning activities.

OIKONET A global multidisciplinary network on housing research and learning

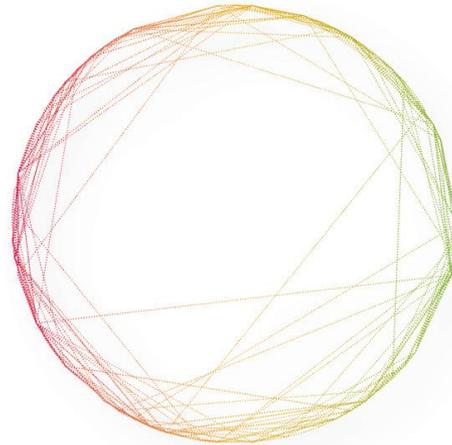

TARGET GROUPS: Universities (teachers and students from various disciplines), researchers on housing studies, professional organizations, community and social organizations

- **12 learning spaces**
- **4 community outreach projects**
- **3 workshops**
- **3 conferences**
- **20 exhibitions**
- **53 videos**
- **18 seminars**
- **24 public reports**
- **3 articles, 11 papers**
- **2 books**

Community Participation

GREGOR HERDA

As Arnstein noted a near half-century ago, the term *community* or *citizen participation* has been open to various interpretations as well as a degree of misuse. In its most ideal incarnation:

It is the redistribution of power that enables the have-not citizens, presently excluded from political and economic processes, to be deliberately included in the future. (...) it is the means by which they can induce significant social reform which enables them to share in the benefits of the affluent society. (Arnstein, 1969, p. 216)

Community participation in the context of housing delivery, as in any other context, runs the risk of becoming an empty ritual, which allows the power-holders to claim that all sides have been considered, without any real redistribution of power. In this regard, Cooke and Kothari (2001) have argued that participatory processes are just marketing tools for “outsiders” to legitimise interventions. Opposing this view, Hickey and Mohan (2004, p. 3) considered participation to be a “legitimate and genuinely transformative approach to development”.

Community participation is crucial for the creation of socially and culturally appropriate housing which reflects the needs and preferences of the community. By consulting and involving residents, the needs, opportunities and threats affecting the community emerge, for instance: Use of local construction techniques, cultural traditions to be preserved, group discrimination, security risks and disaster mitigation and prevention, all of which could be considered in the design process. Community participation can create a sense of ownership, which in turn can increase subsequent prospects for the adequate maintenance of the housing stock.

- The crisis of representation leads to a greater involvement of citizens in decision-making in politics, in society,.. -> an apparent lack of shared visions, a world *à la dèrive*, moving ahead by short-term impulses.
- Citizen participation is back to fashion; or it was always there, since at least from the 1960s, also in architecture and urban planning.
- It is a global phenomenon, leveling societies across cultural and economic differences.

United Nations, New Urban Agenda, Habitat III, Quito, 2016

“We envisage cities and human settlements that:

(b) Are participatory, promote civic engagement, engender a sense of belonging and ownership among all their inhabitants, prioritize safe, inclusive, accessible, green and quality public spaces that are friendly for families, enhance social and intergenerational interactions, cultural expressions and political participation, as appropriate, and foster social cohesion, inclusion and safety in peaceful and pluralistic societies, where the needs of all inhabitants are met, recognizing the specific needs of those in vulnerable situations”

“We commit ourselves to promoting national, subnational and local housing policies that support the progressive realization of the right to adequate housing for all as a component of the right to an adequate standard of living, that address all forms of discrimination and violence and prevent arbitrary forced evictions and that focus on the needs of the homeless, persons in vulnerable situations, low-income groups and persons with disabilities, while enabling the participation and engagement of communities and relevant stakeholders in the planning and implementation of these policies, including supporting the social production of habitat, according to national legislation and standards.”

Sherry R. Arnstein, *A Ladder of Citizen Participation*, 1969: “Citizen participation is a categorical form of citizen power. It is the redistribution of power that enables the have-not citizens, presently excluded from the political and economic processes, to be deliberately included in the future...It is the means by which they can induce significant social reform which enables them to share in the benefits of the affluent society”. *Journal of the American Institute of Planners*, 35(4), 216–224.

Henri Lefebvre, *The Right to the City*, 1968: “The right to the city cannot be conceived of as a simple visiting right or as a return to traditional cities. It can only be formulated as a transformed and renewed right to urban life [Its morphological base and its practico-material realization] presumes an integrated theory of the city and urban society [...] It gathers the interests ...of the whole society and firstly of all those who inhabit.” Translated by Eleonore Kofman and Elizabeth Lebas, *Writings on Cities*, 1996.

Hickey, S., & Mohan, G. (2004). Participation—From tyranny to transformation.

London & New York, NY: Zed Books: “Participation essentially concerns the exercise of popular agency in relation to development...based on recognizing existing capacities of people as active claims-making agents...[it is a] legitimate and genuinely transformative approach to development”.

- Community participation favors the use of local construction techniques; cultural traditions to be preserved; group discrimination to overcome; security risks and disasters to be prevented.

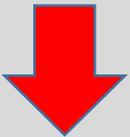

- Community participation contributes to create a sense of belonging; improve social capital and local economic development; empowerment of the community, transformative participation and institutional change.

Cooke, B., & Kothari, U. (2001). Participation: The new tyranny?

London, New York, NY: Zed Books.

- Participatory development needs to be continuously adjusted to the needs of people; communities are not homogeneous, static and harmonic entities; people’s knowledge is instrumentalized into a planning knowledge; it fails to recognize the different and changing identities of individuals; it dissolves conflicts and prevents real change,...

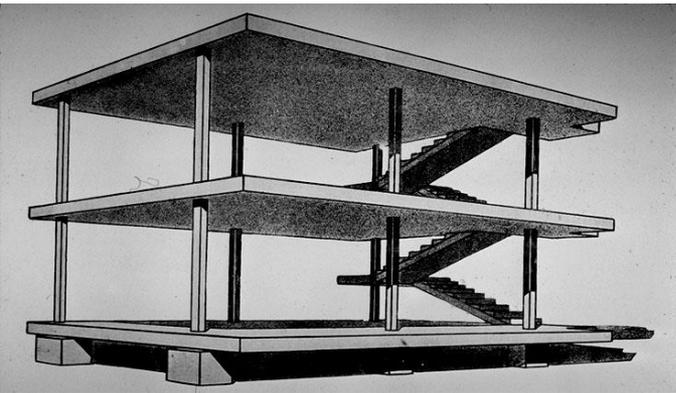

PARTICIPATION IN ARCHITECTURE

Giancarlo De Carlo, *'Il Pubblico Dell'Architettura'*, 1970: “To discover the real needs of the users therefore means exposing and acknowledging their rights to have things and their rights to express themselves; it means provoking a direct participation and measuring oneself with all the subversive consequences that this implies; it means questioning all the traditional value systems which, since they were built on non-participation, must be revised or replaced when participation becomes part of the process, unleashing energies that have not yet been explored.”

Translated in P. Blundell Jones, D. Petrescu, J. Till, *Architecture and Participation*, 2005

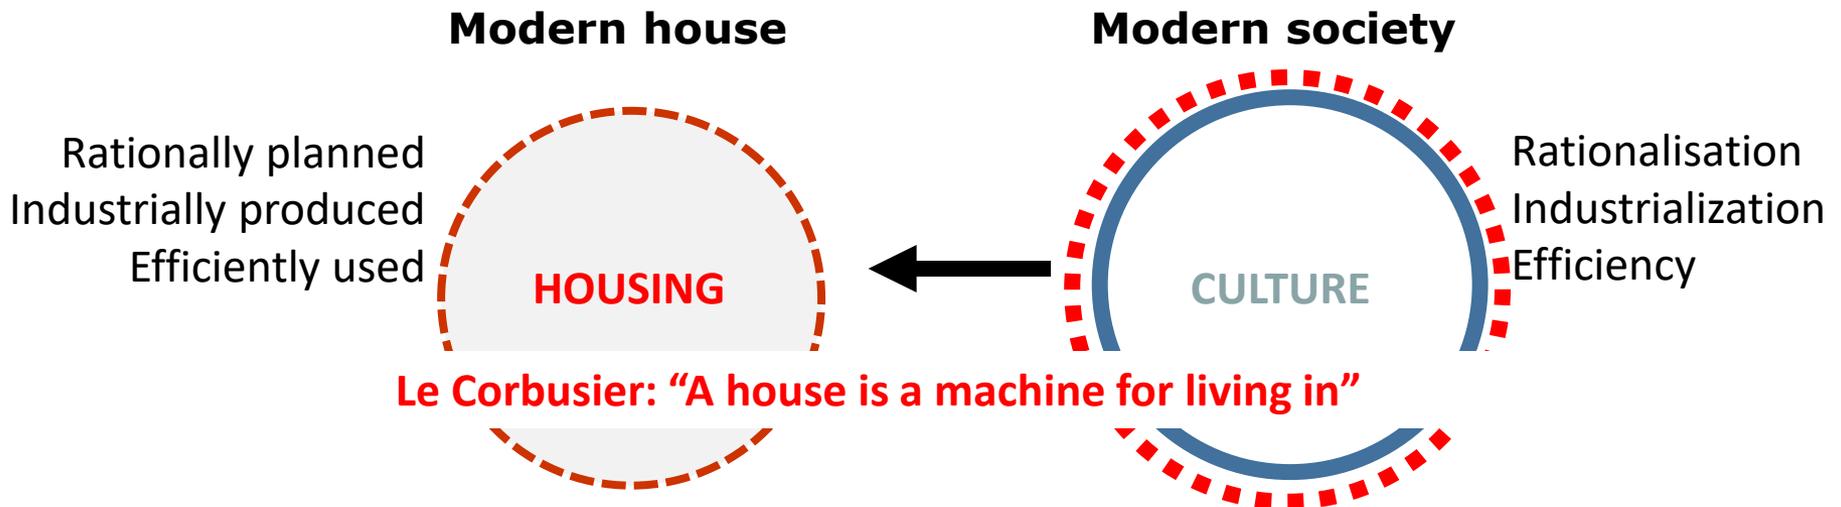

PARTICIPATION IN ARCHITECTURE

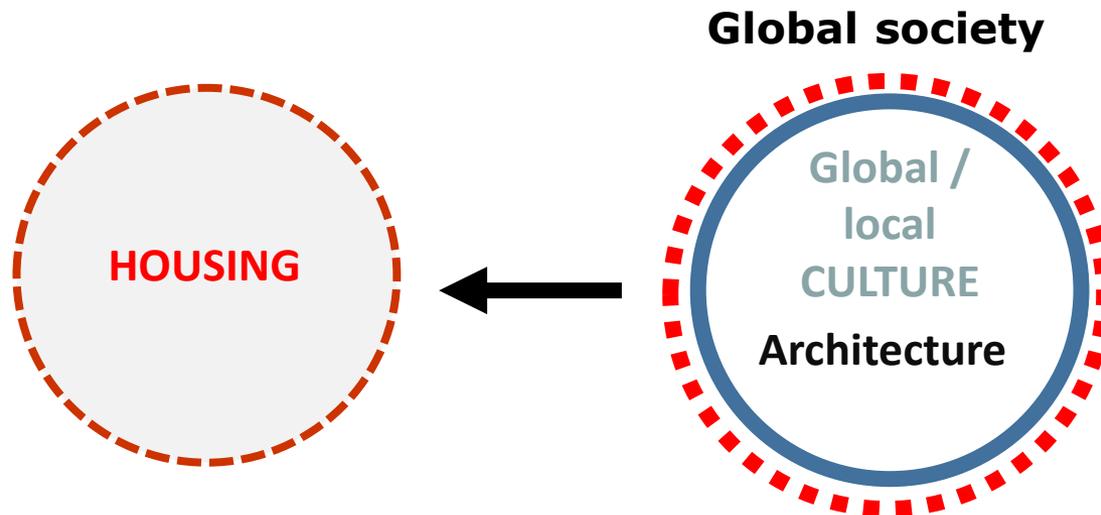

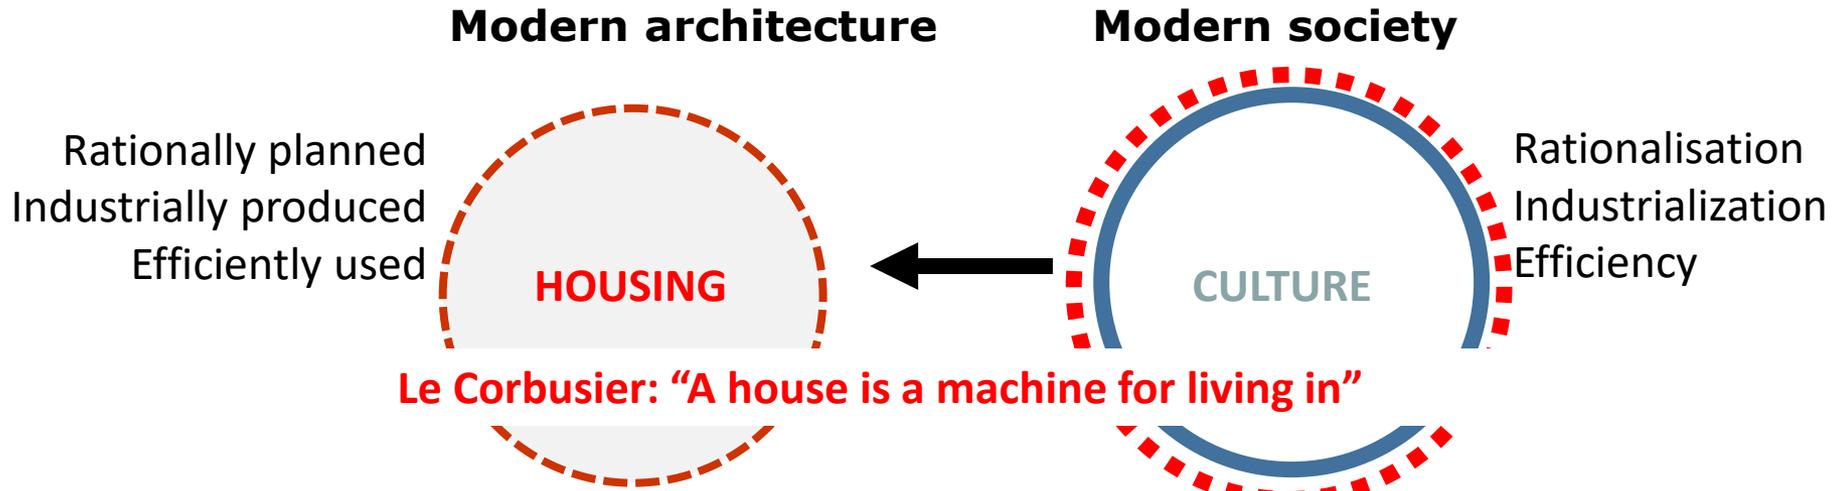

“Our exterior world has been formidably transformed in its appearance and its use owing to the machine. **We have a new vision and a new social life, but we have not adapted the house accordingly.**”

Le Corbusier, Toward an architecture (Vers une architecture), 1923.

PARTICIPATION IN ARCHITECTURE

Inclusive approach to avoid the divide architecture / society
Architecture operates within society; it is not a mirror of it

Global dwelling is the manifestation of:

- **The existence of driving forces** influencing the contemporary habitat in different cultures, societies and places, among others: gentrification, mobility, sustainability, digitalization, economic and social restructuring,....
- **The will to identify housing needs and to find appropriate solutions** with the participation of citizens and experts, community and local representatives, and political and economic organizations.
- **An inclusive approach to dwelling which** brings together various scales, disciplines, and areas of expertise, including: architecture and urban planning, sociology and community psychology, economics and finance.

COMMUNITY PARTICIPATION

BARCELONA: Actions BRATISLAVA: Actions RIMINI: Actions SKOPIJE: Actions

PARTICIPATORY ACTIVITIES

This blog is dedicated to present the activities to engage different stakeholders –professional and citizens; local administrations and civic organizations; students and tutors from architecture and planning schools– in participatory processes aimed at identifying the problems that local communities faced with regard to housing.

Specifically, four actions have been planned by OIKONET partners in different locations in Europe to involve a variety of local actors:

- In Barcelona, Spain, a participatory action has been carried out by the School of Architecture La Salle and the cooperative of Sostre Cívic from October 2013 to January 2014. The purpose of the action has been to engage architecture students and future residents of this building in a collaborative process with the aim to identify the needs of the dwellers. *The activities have been summarized in this video.*
- In Rimini, Italy, a participatory action has been conducted between June 2013 and April 2014, led by Heriscape and the Ordine degli Architetti Rimini. Ten public and private institutions have collaborated to find out ways to overcome the difficulties that some segments of the population (specially, young people) have to access social housing in this medium-size city. *The activities have been summarized in this video.*
- In Skopje, Macedonia, a participatory action has taken place from 15 to 17 October 2015, led by the Faculty of Architecture in Skopje. The purpose of this activity has been to develop methods and tools that enable the residents of the area of Ilinden to understand the use they make of the communal spaces.
- In Bratislava, Slovakia, the purpose is to engage residents of the Petržalka district in the on-going process of revision of the master plan of the area, and to foster the cooperation

OPEN KITCHEN

DESIGN GUIDE - OIKONET SEMINAR - SOSTRE CIVIC

USER'S INPUTS

- "It could be versatile to give the rooms different functions according to the activity that is wanted to be done at the moment"
- "To invite people", "A social space", "Be with friends for all day and all night long", "To be with people"
- "To eat and drink", "Invite people and have a party at home", "To eat with family", "Have a dinner with other people"
- "A place to have meetings and to share food with friends", "Lots of people visiting and living"
- "I like cooking with my daughter because it's something that we both love and we have a lot of fun doing it together"

7 x 1 (Icon of a person)

DESCRIPTION Many people wanted a room to share with friends and family for common activities like cooking, eating or just sitting together and talking.

RELATED THEMES	FAMILY	COMFORT	MULTIFUNCTIONAL SPACE	SOCIABILITY
----------------	--------	---------	-----------------------	-------------

PROPOSAL In our proposal, we want to get away from the widespread standard of kitchen and dining room as two separate rooms. We prefer a combination of both, inside of one single room, which can be used for a lot of activities, like eating, cooking or inviting friends and family. In this way, the social activity will be concentrated in the same space. The proposal is based on fluid space with approximately 24 square meters and in this space can be constructed a little lavatory to attend the invited people and to concentrate even more the social activities in this space.

GREEN HOUSING

DESIGN GUIDE - OIKONET SEMINAR - SOSTRE CIVIC

USER'S INPUTS

- "To share resources with my neighbours would also help me to feel better because I would be optimizing them"
- "Walk through the nature", "Collect my own food from the garden", "Utilization of natural material"
- "The life in a building with plants and flowers gives vitality", "To save resources"
- "My ideal place to live must have a place like a kitchen garden", "Green spaces to relax"
- "To cooperate with my neighbours", "Reduce, reuse, recycle"
- "To take care of the plants"

DESCRIPTION

Many dwellers would like to have green spaces in their houses. Especially in urban areas like Barcelona, this seems to be a very important point of ideal living. Some of them mentioned that sharing a place to plant fruits and vegetables would improve their feeling of living in community and make them feel better through optimizing natural resources.

RELATED THEMES

ECOLOGY	NATURE	COMMUNITY	NEW RESOURCES
---------	--------	-----------	---------------

PROPOSAL

For this very important aspect we propose that a part of the rooftops should be used as private gardens for the building. They could be used by everyone interest in cultivate vegetables and fruits for their own consume. As an addition, this place can be the section of the building where the cooperation can happen in an very intensive way, as the dwellers can work and take care of the plants together and by that can socialize and spent some time in group.

DIAGRAMS

DESIGN PROPOSALS

ROOFTOP GARDEN & BALCONY GARDENING

COMMUNITY GARDENING AS A FACTOR OF SAFETY, LABOUR, NEIGHBOURHOOD IMPROVEMENT, SENSE OF COMMUNITY AND CONNECTION TO THE ENVIRONMENT

BALCONIES AS THE OPEN BUFFERS BETWEEN INTERIOR AND EXTERIOR

ROOF AS A COMMON SPACE FOR MEETINGS AND COMMUNITY EVENTS

GREEN EDUCATION AND CONSOLIDATION OF GOOD EXAMPLE OF A NEIGHBOURLY COMMUNITAS

SATISFACTION AND SAVINGS FROM OWN GROWN VEGETABLES

PROJECT ELEMENT

Alejandro Calleja, Beatriz Ferrão, Izabela Grotowicz, Jeanne Scholtz, Sebastian Baier_School of Architecture La Salle

CASE STUDIES: School of Architecture La Salle, Barcelona, Spain

Omayra Rivera's Lecture. Bakema's elements of transition, Smithson's signs of occupancy, Alexander's pattern language or De Carlo's participatory process

Lead partner: LA SALLE (FUNITEC)

This project is funded with support from the European Commission (Project number 539369-LLP1-2013-1-ES-ERASMUS-ENW). This publication reflects the views only of the authors, and the Commission cannot be held responsible for any use which may be made of the information contained therein.

The role of urban design and management to deliver places which are inclusive, safe, aesthetic and technical requirement.

Awareness of the need for

CONCLUSIONS

Some conclusions.....

- There is no established methodology to design a participatory process, they depend on local conditions; each participatory process is unique, even within the same locality.
- Participatory process require time to get inside a community, to live and share their problems.
- All participants in a participatory design process are learners, students and citizens; it is not about teaching a community, but about learning with them.
- Students exercise new roles as mediators and communicators; as designers of collaborative design processes; they learn to use tools (interviews, surveys, sociograms, statistics...) to analyse the social dynamics of a community

Some conclusions.....

- Integrating community participation in the architecture curriculum is an opportunity to create new learning spaces, more inclusive design studios which integrate multiple actors and various disciplines; design studios immersed in the social reality, dealing with actual problems and interacting with real persons, rather than simulating a reality in abstract scenarios and roles.
- Local administrators, architects, planners and other professionals need to find ways to bring the insights that emerge in collaborative design processes in the artefacts they produced: building designs, urban and planning regulations,...

....and some reflections.

- Participation is mostly applied on the small scale, but what about the “big” decisions that affect later the smaller scale? Does participation always come late after the important decisions have been made? – > Citizens believe that they participate, but indeed there is little change in the important decisions
- Can complex issues concerning planning (transport, economic strategies....) which need to take into account the interrelationships between many different levels and dimensions be understood by community members?
- Do architects have the appropriate tools to jointly analyze the interweaving of social and physical structures, to understand the symbolization process by which places acquire meaning?
- Do architects and planners know how to bring the knowledge derived from non-experts in the design and planning process? Can such a bridge be built?
